

THE CANCER CURE THAT WORKED is the true story of scientist and inventor Royal R. Rife, who in the 1930s built a phenomenal microscope that revealed the cancer virus in the living state. He then developed electrical frequency instruments that destroyed the cancer virus in humans. Cure after cure occurred under the supervision of doctors working with Rife and using his instruments -- until the AMA and other interests who stood to lose from a cancer cure decided to take action. What followed ranks among the great American tragedies. The cures were stopped, instruments were damaged or seized, records were stolen, and Rife's supporters were intimidated. For fifty years the work of Roy Rife has drifted in limbo. Now, with the help of Rife's associate John Crane, author Barry Lynes has unearthed the whole story.

450,000 Americans die each year of cancer. Many of you doubtless have a close friend or relative who has had to face this spectre in one of its many forms. Because of the importance of this book, we are giving our mail list supporters an even deeper discount than usual.
